

Verification Services

You've thoughtfully curated your benefit program and services. To provide those programs, you expect the benefits are executed as planned within your overall strategy. But, many organizations are paying to cover benefits for employees or their dependents who are ineligible for coverage. And the remedy can often be a very manual and time-consuming process.

Let us help.

Businessolver® can verify both dependents and events using our single-source benefits technology, Benefitsolver®. In fact, Businessolver has found the percentage of ineligible dependents to fall within 3-10%, resulting in thousands of dollars in unnecessary benefits spend.

We use technology to create a seamless process for you and your employees.

Integrated: Our benefits technology allows employees to manage their verification needs from the same place they enroll in and manage their benefits year-round.

Mobile: Our MyChoice® Mobile App means your employees can upload their verification documents from the ease of their phone or even while on the go.

Engaged: Our service includes automated communications to the employee to ensure they don't miss a deadline in getting their coverage approved.

AI-enabled: SofiaSM, our AI, personal benefits assistant, uses optical character recognition to not only answer employee's verification questions in real-time but also to review and approve documents within seconds.

A thorough dependent verification process can have an immediate impact. Businessolver's automated and innovative tools expedite the verification process, significantly shortening processing time to ensure your employees' dependents receive the coverage they need when they need it. And it's completely transparent for you and your team.
